

So, we aren't done with CSS yet. But it's enough for people to start working while still allowing us to continue tweaking.

Please note, the LEFT SIDE of the screen has a place holder image. It will be our "trash hunger in America" picture and logo. Janel is on it! Go Janel! =D

Otherwise:

Basic Layout:

In code, when working on your section:

1. Just copy and paste the "skeleton.php" into your code
2. Then just start coding where indicated:

```

<!-- right side of screen -->
<div class="col-md-8 col-xs-8">
  <div class="inside inside-full-height">
    <div class="content">
      <div class="mainText">
        <h3>Your Assigned Section Title Here</h4>
        <p>This is where you will code and work!!</p>
        <p>Tables, login, text, and forms in this section, please </p>
        <p>Example Buttons to use below: </p>
        <p><button class="buttonLogin" type="button">Login</button></p>
        <p><button class="buttonOther" type="button">OtherButton</button></p>
      </div>
    </div>
  </div>
</div> <!-- end row -->

```

If text or buttons, CSS is already done. For tables, we can add that in just a bit, but the white background will be provided with consistent margins, padding, etc.

Or, in the above area, simply write your code in a different php file and:

```

<?php include("yourfilename.php"); ?>

```

In the bounds of the “mainText” div.

To use buttons, simply make sure you use the “buttonLogin” class for important buttons, and “buttonOther” class for green buttons... and use wherever on earth you want.

The nav bar for DONATOR is made. It’s included already and can be linked when pages are done.

Anonymous USER nav bar up and coming... any takers? It’ll be an easy “include” statement.
